Persistent pursuit

BRED Life Science

The company's self-developed products are classified into four brands as follows.

MaleFree®----- a series of products for semen collection

Many innovative technologies are applied to the products that embody the humanistic care for male patients. The products are suitable for many various methods used for semen collection, and guarantee the reliability of data for the evaluation and analysis of semen. The success rate of pregnancy can be improved by using these products in the implementation of assisted reproductive technology.

SemenAssay®----- a series of diagnostic kits for biochemical and immunological assay for semen

SemenAssay® is a revolutionary innovation on the basis of traditional technologies, following the World Health Organization standards and norms to meet the trend of automation and testing in batch. The SemenAssay® not only reduces the intensity of experimental work, but also ensures the accuracy and repeatability of the results.

SpermFunc®---- a series of diagnostic kits for sperm function analysis

The world's first product to enable the sperm function tests recommended by *WHO Laboratory manual for the examination of semen and sperm-cervical mucus interaction (4th Edition)* to be universal and applied to provide direct evidence-based data in the implementation of assisted reproductive technology.

FertiMedium®----- a series of products for reproductive media

By means of meeting *in vitro* developmental requirements of the gametes and zygotes at different life stages and resolving the problems of low recovery and high damage in the clinical process for the optimized sperms, FertiMedium®- will improve the possibility of pregnancy in assisted reproductive technology.

diagnostic kits for male infertility assays that in accordance with WHO criterion.

We not only supply reproductive medicine clinic with professional products and services for productive etiopathogenesis diagnosis and therapy, but also supply infertile patients with humanistic products and personalized services.
