SpermFunc® SHB - Kit for Sperm-Hyaluronic acid Binding Assay (Capture Assay of Solid Phase)

It is mainly used for evaluating the maturity of motile spermatozoa.

Studies demonstrated that one important reason of spontaneous abortion or stop infertility on pregnancy early stage is the low value of Sperm-Hyaluronan binding rate.

Features:

- The revolutionary design and the second product in the world for determination of Sperm-Hyaluronan binding assay (Capture assay of solid phase).
- Easy to use, the test can be finished within 15 minutes. No special instrument needed, thus it could be used in ordinary laboratory.
- Provide sperm overall quality evaluation index
- To provide more guarantees in accuracy and repeatability of testing results.
- 40T/Kit
- CE approved
